

# Dialogfeed API

List of parameters :

## ***from\_timestamp=timestamp***

- *the value should be in the “second since epoch” (UNIX or POSIX) format.*
- *Provided with a correct value, dialogfeed will return all posts created*

## ***offset=n***

- *Return all posts without the first n posts. The first n posts are classified by date (created\_at), the most recent first. (deprecated in favor of since\_id)*

## ***since\_id=uid***

- *Return x (max parameter, default = 100) posts after uid post. Posts are classified by uid ASC. Note: this works only for calls in widgets with < 5000 posts & it searches within this range..*
- *If you need **pagination**, use this.*
- *In JSON or XML it is the “uid” field (not ID neither remote). Ex: <uid>513373212</uid>*

## ***max\_id=uid***

- *If you need **pagination**, use this.*
- *Return x (max parameter, default = 100) posts before the uid post. The posts are classified by uid DESC.*

## ***max=n***

- *return only the last n posts. (N is between 1 and 200. If n > 200, you will get 200 posts). Please note, the maximum value is 400.*

## ***callback\_jsonp=my\_js\_function (only for json feed)***

- *the callback\_jsonp option force to render a jsonp response with “my\_js\_function” as the callback function.*

## ***post\_nodes=author,content***

- *filter the node for the xml,json posts feeds*
